

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph 2, on page 3, with the following amended paragraph.

Since such diameters R and r are typically approximate values ~~each other~~, precise registration is necessary to register the mutual positions of the areas cut between cut area by the slit 107 and the easily-peelable layer 105. Actually, in such cases, considerable skilled techniques are needed to apply lubricant minutely and to register the layers precisely are necessary, and production loss on the lid member would not be avoided.
